

As part of our commitment to advancing sustainable tourism, we encourage our tourism partners to improve their sustainability performance by providing them with the guidance below.

- Ensure insurance is in place for guests and team
- Identify health & safety risks, implement management systems, and provide appropriate safety equipment, including life jackets for snorkellers (to avoid kicking over shallow corals)
- Ensure enough team members are available in case of emergency
- Monitor activity area conditions (including weather) in advance & during the activity
- Be familiar with activity area and ensure that navigation & communication tools are in good working order
- Maximise local economic benefits through employment and purchasing
- Avoid single use & disposable items, provide adequate waste collection for safe disposal, and pick up any rubbish found along the way
- Use eco-friendly products, e.g., sanitising products for diving / snorkelling equipment
- Be waterwise and take pro-active measures to use water sparingly
- Minimise energy used in the activity as part of a climate action strategy
- Provide information in advance about your sustainability actions, activity accessibility, what to expect, and what to bring with, including reef-safe sunscreen (or rash vests for snorkelling)
- Screen participants ahead of time to ensure activity is well suited to fitness level & ability; provide refresher courses or buoyancy orientation for less experienced / out-of-practice divers
- Verify that divers using bulky photographic equipment are sufficiently experienced to control equipment and prevent activity area damage
- Manage group size to minimise impacts on people & planet, and ensure safe guide: diver ratio
- Obtain written confirmation, e.g., via indemnity, that participants are aware of activity risks
- Brief participants before the activity starts about do's and don'ts, safety, hazards to be aware of, what to expect, logistics, communication, marine wildlife disturbance & viewing distance, and preventing damage to marine ecosystem
- Share information about local nature & culture, as well as social development / conservation projects that participants may want to support
- Show respect for the land, waterways, wildlife, and other users in the activity area
- Discourage the use of **gloves** (to discourage participants from touching coral)
- Prohibit the use of sunscreen that is not "reef-safe"
- Ensure that flash photography is not excessive as repeated flash can cause undue stress
- Confirm that all diving equipment is secured to prevent damage from dragging
- Monitor divers for neutral buoyancy to avoid contact with coral reef, seagrass, sandy surfaces
- Find an area free from fragile organisms should a rest / pause in the dive be necessary
- Use low intensity lights for night dives to avoid confusing and causing harm to marine wildlife
- Repair and compensate for any damage caused to the activity area
- Participate in conserving activity area integrity; notify authorities of concerns and participate in marine conservation and rehabilitation projects
